TdLab Geography

**Bachelor's and Master's theses (M.Sc. and M.Ed.)**

The TdLab Geography, which is a transdisciplinary laboratory, focuses on three main areas: adaptation (adapting to the impacts of climate change), mitigation (climate action), and education (developing future literacy, transformative and research-based teaching, and education for sustainable development). The team collaborates with actors from authorities and civil society to develop science-based foundations for the aforementioned topic areas. Natural and social science research is linked to practical requirements and knowledge. The transdisciplinary research process employs innovative methods to effectively integrate different perspectives.

Please complete the questionnaire provided and upload it to HeiBOX using the following link: <https://heibox.uni-heidelberg.de/u/d/ed9fab481f3640b1a346/>
