

## **KnowledgeScapes within Governance Arenas**

*Ulf Matthiesen (Sociology), Humboldt-University of Berlin (Germany)*

Applying a new conceptual approach to the coevolutionary field of knowledge, space and network dynamics this presentation will focus on four research questions:

1. on the interplay of formal and informal interaction networks and milieus in knowledge-based spatial dynamics
2. on the social construction and application of decisive knowledge forms, knowledge bundles, and KnowledgeScapes within this process
3. on the relevance and functioning of transaction and translation zones of knowledge within knowledge-based spatial developments and knowledge cultures – and of “space pioneers” within it
4. on new forms of spatially relevant interplay between Governance arrangements and KnowledgeScapes.
